SINAIDA KRIVCHENKO

NEW MEDIA ARTIST

STATEMENT

Every language I learned well enough to be fluent in still had a territorial border around it.

A body moving in a room has never needed that permission, and neither has light or sound.

And no room makes sense if there is nobody in it.

What I want out of a piece is a shared memory, something a group of strangers can carry out of a space together, having arrived at it without a common vocabulary.

My background in engineering gave me a fascination with systems; ballet taught me to listen to bodies, spaces and other people.

I build the structure, and the audience completes the work.

The machines can do almost all of this alone.

The person standing in front of it is the reason any of it ever happens.

WHERE NEXT

The problem I keep returning to is one every cultural venue shares: an audience spends the evening in one room, most of it looking at a phone.

I address it with experiences that answer bodies and sound in real time, so a group of strangers leaves with something they made together without needing a shared language first.

I am looking for galleries, festivals and venues that want a room people take part in. My installations need one laptop and a projector, and they travel easily.

SELECTED SKILLS

TouchDesigner
Real-time audio-reactive visuals
Body and hand tracking
Projection mapping
Interactive installation
Live event visuals

BACKGROUND

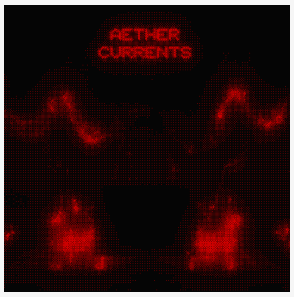

Before working under my own name I spent six years in Amsterdam's cultural sector: concept, audience building, fundraising and live events for an independent ballet foundation, and hosting a ballet studio's showcases for audiences of around 500.

I trained as a biomedical engineer, with an MSc in Biomedical Engineering from Bauman Moscow State Technical University, and graduated from the IT Leadership Program at General Electric.

AETHER CURRENTS

An instrument played with bare hands. A camera reads your fingers and the field answers, so the body is the whole controller.

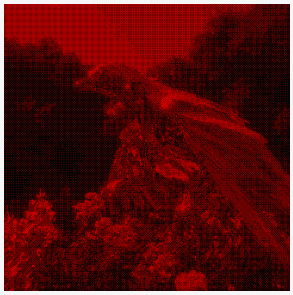

WEB TOOL · 2026

CONSPACE ROOMS

A labyrinth for eighteen paintings from the SOULS cycle by UVALISS. Candles lead the way, and the rooms change with every visit.

INTERACTIVE PROJECTION · 2026

REDKIE PTITSY

Live visuals for the band Redkie Ptitsy: nine projections, one per song, built in TouchDesigner.

SKLAD NO. 3, MOSCOW · 2026
