KRIVCHENKO

NEW MEDIA ARTIST

STATEMENT

Every **language** I learned well enough to be fluent in still had a territorial border around it.

A **body** moving in a room has never needed that permission, and neither has **light** or **sound**.

And no **room** makes sense if there is nobody in it.

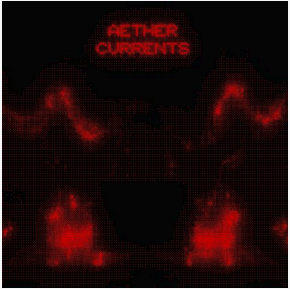

What I want out of a piece is a shared memory, something a group of strangers can carry out of a space **together**, having arrived at it without a common vocabulary.

My background in **engineering** gave me a fascination with systems; **ballet** taught me to listen to bodies, spaces and other people.

I build the **structure**, and the audience completes the work. The small **glitches** are where that shows, and they are the reason the whole thing reads as living.

The **machines** can do almost all of this alone.

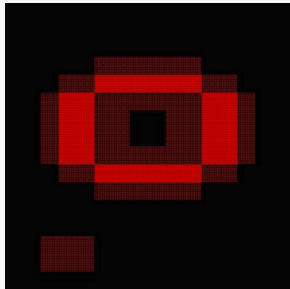

The **person** standing in front of it is the reason any of it ever happens.

AETHER CURRENTS

An instrument played with bare hands. A camera reads your fingers and the field answers, so the body is the whole controller.

WEB TOOL · 2026

THE EYES, CHICO

A room filled with red light, a laptop and a projector. You steer a soul across a field of poppies and pick up questions about yourself.

INTERACTIVE PROJECTION · 2026

REDKIE PTITSY

A full set of live visualizers for the band "Redkie Ptitsy". Audio-reactive project made in TouchDesigner.

Live at SKLAD №3, MOSCOW · 2026

WHERE NEXT

The problem I keep returning to is the one every cultural venue now shares: people have never been more connected and never less met, by each other or by themselves.

I address it with experiences that answer bodies and sound in real time, so a group of strangers leaves with something they made together without needing a shared language first.

I am looking for opportunities with institutions that treat their audience as a participant.

The work becomes complete when a person walks in and moves, and it gives back something different to each person who does.

SELECTED SKILLS

TouchDesigner
Real-time audio-reactive systems
Camera-based body and hand tracking
Projection and projection mapping
Interactive installation
Live visuals for concerts

BACKGROUND

Before working under my own name I spent years in the Amsterdam cultural sector, running the visual identity and producing ballet experiences for live audiences of up to 500 people.

I trained as a biomedical engineer, with an MSc in Biomedical Engineering from Bauman Moscow State Technical University.
